

The time has come to show you what I have been working on.

After many years in the world of radio control, I wanted to turn part of that experience and knowledge into a practical tool for RC racers.

I present:

RC COMPETITION ENGINEER

An application designed to help racers diagnose the handling problems of their cars and work towards a possible solution in a logical and structured way.

Because when a car isn't performing the way we want, we don't always need someone to simply tell us:

"Use this setup."

We need to know:

- What is the car doing?
- Why might it be doing it?
- What should I check first?
- What should I try next?
- And why?

RC Competition Engineer is designed to guide you through that process.

You describe how your car is behaving and the conditions you are working in, and the application guides you through a diagnostic process, telling you what to check, what to try and why, helping you work towards a possible solution.

NO INTERNET. NO WAITING.

One of the key features of RC Competition Engineer is that it does not require an Internet connection to work.

You can use it at the track, in the pits or wherever you are, even when there is no coverage.

And the response comes virtually instantly, because its operation does not depend on sending each query to a server and waiting for a response.

Ask. Analyse. Respond. And it also includes other functions designed specifically for racing.

In our tests, responses are generated in hundredths of a second.

A METHODOLOGY BASED ON REAL RACING EXPERIENCE

The knowledge and methodology behind RC Competition Engineer are based on years of direct experience in RC racing, car setup and diagnosing handling issues.

For this reason, its analysis and recommendations may differ from other information, opinions or methods you may find on the Internet.

Perhaps this approach will work even better for you.

RC Competition Engineer is not intended to replace the driver's own judgement or guarantee a specific result.

Its purpose is to provide a structured diagnostic methodology and help the driver decide what to check and what to try.

WHAT MAKES RC COMPETITION ENGINEER DIFFERENT?

Step-by-step diagnosis

It doesn't simply give you an answer. It guides you through a logical process to analyse your car's behaviour.

Always with you

A tool you can carry on your phone and use whenever you need it, including at the track and without an Internet connection.

Make the interface your own

You can customise the application's interface according to your preferences for a more comfortable, intuitive and enjoyable experience — use the same colours as your car's body shell, or even choose the image you want to welcome you every time you open the application.

Functions designed for racing

In addition to the diagnostic tool, RC Competition Engineer includes other functions designed to assist the driver during racing and competition.

An application that will keep evolving

RC Competition Engineer doesn't end with this first version.

The application will continue to evolve, with new improvements and features being added progressively.

ONE-TIME PURCHASE. FREE LIFETIME UPDATES.

RC Competition Engineer is available with a single one-time payment.

There are no monthly or annual subscriptions.

Once you purchase the application, you will have access to it and to all future updates and new features we add, without having to pay for them again.

The idea is that those who start using RC Competition Engineer now can continue to benefit from its evolution for years to come.

AN APPLICATION THAT GROWS WITH ITS USERS

I want the first users to be precisely you: RC racers.

I want to receive your feedback, your opinions, your criticism and also your ideas.

I want to know what works, what we can improve and what new features you would like to see.

Because the goal is not to create an application and leave it there.

The goal is to make it evolve together with the racing community.

Whether you are new to RC or have been racing for decades, I invite you to discover it, try it and give me your feedback.

RC COMPETITION ENGINEER

A practical tool to help you better understand your car, diagnose its handling issues and determine what to try next.

LAUNCH PRICE: €9.95

One-time purchase · Free lifetime updates

NOW AVAILABLE

Available for iPhone and Android.
